

Areas Being Served

ADT – Reports – Areas Being Served

This is not a new report, but it has undergone a modification per your request. This report allows you to analyze the geographic regions from which your residents arrive.

The dialog box is titled 'Areas Being Served' and contains the following fields and controls:

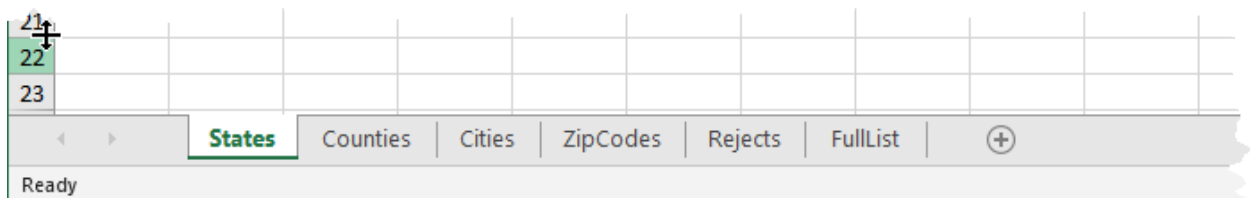

- Date range for the report?**: A date range selector showing 'Year to Date' with a dropdown arrow. Below it, the date range is set from '01/01/2018' to '11/14/2018', with small calendar icons on either side.
- Report on all residents?**: A checkbox labeled 'Yes' is checked, followed by the text '/ No' and an unchecked checkbox.
- Buttons**: A red 'Cancel' button with a red 'X' icon and a green 'OK' button with a green checkmark icon.

You may now select any date range that you want to analyze. You may also indicate whether you want to see all residents:

- Yes – will show all residents in your facility during your chosen period.
- No – will show only those that are new admits, readmitted after a discharge with return not anticipated, or readmitted after a discharge more than 30 days ago.

The report will automatically export to excel as a series of pages:

- Count per state
- Count per county
- Count per city
- Count per zip code
- Rejects – if any information for a resident is incomplete or invalid (i.e. zip code incomplete or missing) they will be counted here and not in any of the other categories
- Resident list – You will have a list of all residents included in the counts.

You may add your own subtotal or total lines as you need.
