

## Export to PointRight

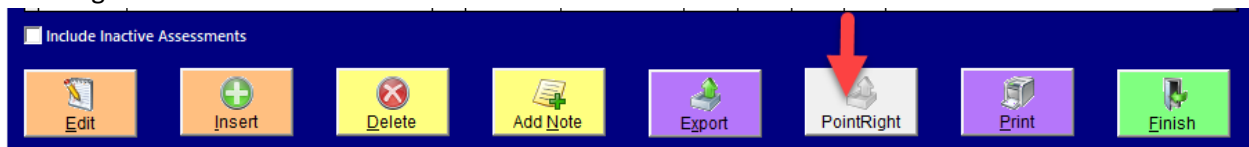

We now have an interface that will automatically upload MDS assessments to PointRight so you can run a variety of analytics/reports on your data.

### What is PointRight?

PointRight ([www.pointright.com](http://www.pointright.com)) is an online service that utilizes your MDS assessment data in a variety of “predictive analytics services and reports”: quality improvement, lower rehospitalization, compliance achievement, and risk management leading to more accurate reimbursement.

### How Does the Interface Work?

You need to have a subscription to PointRight. They will give you an ID and password. We incorporate that into an RMS update specific to your facility. Once that is in place, you will notice an active PointRight button on the MDS selection screen.

If you have purchased the interface, this button will be colored to indicate that it is active. Otherwise, it will be gray to indicate no link is possible (as illustrated above).

Highlight the assessment you wish to upload to PointRight, click the button, and a file containing the assessment will automatically upload to your PointRight account. Your MDS information will now be available within your online PointRight account.
