

## Resident Management System Admission, Discharge, Transfer and Census

These two components of RMS are key to P&NP's integrated approach to information management. Data entered here will be available to all other modules. This dramatically increases the efficiency and effectiveness of information management by decreasing the need for double entry and the errors that can result.

In addition to resident information, you maintain information on demographics, clinicians, sources of residents, responsible parties and relatives, religious affiliation, funeral homes, tissue banks, and allergies. User-defined fields allow you to track information that is unique to your facility.

A-D-T includes a Document Management and Imaging system to store any scanned or digitized images like resident photos and important documents such as x-rays, lab results, DNRs, etc. Resident photos appear on-screen and may be placed on the face sheet.

### General Features:

- Tracks new admissions, re-admissions, discharges, room changes, diagnoses, and insurance changes.
- Allows the user to completely control and report census. Track the insurance the resident was on each day of any given month with the ability to edit history to ensure accuracy of the census. Transactions are stored so that you always have a complete history for each resident.
- Tracks demographic data, clinicians, source of resident, responsible parties and relatives, religious affiliation, funeral home information, tissue bank information, allergies, and much more.
- User-defined fields allow you to track information that is unique to your facility.
- Unlimited responsible parties can be marked for resident relationship (examples: Dr., POA, HCP, 1st Notified).
- Discharges can be done with or without bed hold and re-admissions bring back historical data for the resident.
- User-maintained databases include units, doctors, nurse practitioners, social workers, assessors, and hospitals. An ICD-9 database is covered by the maintenance contract and updated once per year.
- Produce different reports under different condition statements. Reports include face sheets, history reports, room reports, resident census, and resident histories with diagnosis.
- Information is available on statistical cost report transactions for the RHCF reports.
- Reports can be exported as Excel files, word processing files, or as PDF's.
