

Resident Management System Infection, TB, and Immunization

This module tracks infections, TB monitoring, immunizations, and vaccinations for the facility and produces reports by category between any two dates.

Users build their own pick lists which enables them to merely mouse click their answers into fields. In addition, all immunization data can be entered by individual or by unit. The system comes with standard infections and can be customized to the specific needs of the facility.

Immunization information is interactive with the MDS 3.0.

General Features:

- Tracks resident, employee, and other (i.e. visitor) infection data. Tracks TB monitoring and immunizations. Types of immunizations are configured by facility.
- Provides information on counts, follow up, repeat, and scheduled future testing for TB and any other selected immunization such as Hepatitis B.
- Graphics include vertical stacked bars, side by side bars, and pie charts.
- Reports are generated with parameters that allow you to sort data based upon date, all or specific infection categories or types, units, or residents/employees.
