

Resident Management System MDS 3.0

The MDS 3.0 module contains on-line access to the CMS module. To read the manual, press the F1 help button and field related help will pop to your screen. Where appropriate, the Groupers will calculate the Rug IV scores for Medicare and the Medicaid "cross-walked" Rugs III. All assessments are archived and easily accessible with a simple keystroke while preparing any current assessment.

This module integrates with ADT data for basic resident information. If utilized, it also integrates with Resident Observations 3.0 to read interview data, Resident Scheduling for Quick Tracker therapy information, and Infection Control for immunization information. The MDS module features the ability to automatically calculate the appropriate CATs (Care Area Triggers) and to produce reports with this information. MDS 3.0 CAT items will be used by and may be viewed in the MDS 3.0 Care Planning Module. The MDS 3.0 module will also communicate information back and forth with the Care Area Assessment module when both are implemented.

P&NP performs validity checks to make sure that you enter only the data that you should and only within the ranges that are allowable. We use a technique known as screen audits to perform this task. When incorrect data is entered, the field turns pink or red indicating a data issue. Hover the mouse over the field to display the reason why the field is in error.

Signing off on the assessment can now be done with an electronic signature. Once complete the assessment can be zipped and electronically submitted.

General Features:

- Easy to use module ensures maximum reimbursement due to timely, accurate, and error-free submissions.
- Screens mimic CMS forms for ease of use and understanding. Screens track type of form being done so only questions for that form type are available for input thus saving time.
- On-the-fly error checking and on-line, context sensitive help promotes error-free entry while completing this MDS. Final error reports ensure accurate completion guaranteeing successful acceptance.
- Each MDS for a resident is stored for historical purposes. While completing a form, a single click will display historical data for reference. Data from a previous assessment can be pulled into the current when opening a new form, if desired.
- Electronic biometric signatures that follow the true Department of Commerce standard allow you to maintain paperless records.
- Create all MDS Forms including MPAF, Protocol Summary: Care Area triggers, RUGS III and IV Scores and justifications, Statutory and Medicare Assessment Scheduling, QA Reporting, and more. RUG scores are calculated in real time.
- Data links directly to the Care Area Assessment (CAA) for quick, accurate completion of the CAA and Care Plan.
- Data can be cross-walked into the 802 Resident Characteristics and 672 Resident Census and Conditions in preparation for survey.
