Resident Management System
Risk Management

The RMS Risk Management module allows for the tracking of resident and staff incidents, accidents, and falls.

Facility configured, this module allows for the entry of facility specific information such as locations or sites. This information then is the basis for selection "pop-up" lists which provide extremely fast record generation.

Detailed reporting by date, unit, type of accident, etc. gives you the data necessary for mandated reporting compliance and internal quality assurance.

General Features:

- Ability to configure the data for facility specific concerns such as locations, causes, types, etc. This data is then available from selection drop downs when you enter an accident/incident.

- Comply with mandated reporting of accidents, incidents, or falls.

- Audit reports isolate incidents/accidents by unit, shift, or type to help isolate causes of accidents.

- Full edit and delete capability for those having the appropriate level of rights.

P&NP COMPUTER SYSTEMS, INC.

Contact us for a demo of our software:

66 North Main Street
Brockport, NY 14420

Phone: 585-637-3240
Fax: 866-670-2234
E-mail: sales@pnpcomputer.com

Important Features:

Facility is able to define all of the parameters that are important (such as location, witness, injury, treatment, impact on ability to do work, etc) so that reports are meaningful and contain the data that YOU need to see.

Consistent and controlled data input is achieved through drop down menus containing the facility's parameters.
