# Resident Management System
Resident Observations

P&NP is pleased to announce the introduction of its two pronged Resident Observation Module. The goal of this system is to move the point of data collection as close as possible to the point of care.

This system allows professional staff to set forth what an aide needs to accomplish on a daily basis for each resident. If the Nurse Aide System is active there will be a link to aide assignment in the Care Plan. While the clinician is doing the care plan they can quickly shift right into Nurse Assignment to change the assignment data. The aide can provide care to the resident using the guidance provided by either an up-to-date assignment sheet or with the help of a touch screen tracking tool.

The other component of the system is the ability for the aide to track daily assessment data useful for the MDS documentation process. This sub system can be used by any of the clinical staff of the facility for MDS specific purposes or for general assessment purposes. It has been fully updated to incorporate the latest touch screen technologies for easy and rapid entry. This system allows nurse aides and other staff members to more *accurately and easily* document resident care.

General Features:

- Designed to ensure quick and accurate daily charting by CNAs using touch screen kiosks that are wall-mounted or on carts for real time entry as care is delivered.
- Colorful, easy to use screens guide CNAs in entering MDS 3.0 supportive data for Mobility/ADLs, Restorative, Behavioral, Mood, Cognitive, Pain, Health, Communication, and Swallowing questions. Bowel and Bladder, Vitals, and Skin Issues can also be documented.
- End of shift routine for CNAs prompts for missing Mobility/ADL data for residents under their care. Shift-end compliance reports for nursing oversight are available to maximize data scores for the MDS.
- The shift dashboard immediately posts data entered to track safety notifications, behavior issues, wandering, balance, pain, skin issues, etc. for quick notification of issues and to allow a quick response from nursing staff.
- Shift-end checks allow you to complete all ADL and Mobility questions and to record a second response if an ADL task occurs a second time and would have a different score. Nursing or Social Workers can enter and store interview data as collected. Historical and trending reports are available.
- Data is interactive with the MDS 3.0 module. Nursing oversight reports and edits ensure that data is accurate prior to the MDS staff viewing and accepting data into the MDS.
- Very flexible dietary tracking allows percentage or detailed reporting on all foods, liquids, and supplements consumed. Oversight, trending and chart reports are available.

Important Links:

Links to the MDS so that responses are available while completing the assessment.

Links to the Care Plan so that clinicians can complete Nurse assignments while they are working in the care plan.

Current ADLs are included in the CCD which can be generated at any time and sent via secure e-mail.
